

IT Asset Management System (ITAMS)

Over the last few years, the ITAM market has grown significantly. The International Technology Asset Management Association (ITAMA) reports a market of \$1.5 billion in 2008, up from \$1.1 billion in 2007. The market is expected to reach \$2.5 billion by 2012.

The market is driven by increasing focus on the overall health of the IT portfolio. The market is also driven by the need to manage the lifecycle of IT assets, from procurement to disposal. This includes managing the physical assets, the software licenses, and the data. The market is also driven by the need to manage the risk of IT assets, such as data loss and security breaches. The market is also driven by the need to manage the cost of IT assets, such as hardware and software.

During the period of the market, there was a shift in the market from a focus on hardware to a focus on software and data. This was driven by the increasing importance of software and data in the IT portfolio. The market is also driven by the need to manage the risk of IT assets, such as data loss and security breaches.

IT Asset Management System (ITAMS) is a comprehensive solution for managing the lifecycle of IT assets, from procurement to disposal.
